Install MindCue

For Android phones. It takes about two minutes. (This does not work on iPhone.)

Step 0: Get the file

Open your phone's **Camera**, point it at this square, and tap the link that appears.

No camera option? Open the Internet app and type:
github.com/cczerp/MindTap/releases/latest
then tap **mindcue.apk**.

1. If the phone says the file *"can harm your device"*, tap **Download anyway** (or **OK**). When it finishes, tap **Open**.

2. If it says *"your phone isn't allowed to install unknown apps from this source"*: tap **Settings**, switch on **Allow from this source**, then press the **Back** arrow.

3. Tap **Install**.

4. If a **Google Play Protect** box appears, tap **More details**, then tap **Install anyway**.

   Important: do not tap **Got it** or **OK**. Those close the box *without* installing.

5 When it says *App installed*, tap **Open**. You will see a purple screen with **"I'm in a funk"** at the top.

6 Tap the purple **Allow notifications** button and then **Allow**. That's how MindCue reminds you.

All done! Tap **Settings** (bottom right of MindCue) any time to choose how many reminders you want.

If something goes wrong

"App not installed" — an older copy of MindCue (or Mindful) is already on the phone. Press and hold its icon, tap **Uninstall**, then start again from Step 0. (Nothing important is lost unless you have already written notes in the app.)

I see a yellow message or a blank purple screen — take a screenshot (press **Power + Volume Down** together) and send it to the person who gave you this sheet.

I tapped "Got it" and nothing installed — that's normal. Start again from Step 0 and tap **More details → Install anyway** this time.

The download didn't start — in your phone's Internet app, open the link again and tap the **mindcue.apk** file name.

Getting updates later

Scan the same square again. Install it the same way, **without** uninstalling. Your settings stay. To check which version you have, open **Today** in MindCue and look at the bottom: *"MindCue · build N"*.

MindCue supports a practice. It is not medical care and does not replace a counselor or doctor.
